Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-8 and 11-12, drawn to nucleic acid probes and methods of using said probes, classified in Class 536, subclass 23.1.

II. Claim 9 and 10, drawn to a method of making a probe and a method of identifying a single copy sequence interval, classified in class 436, subclass 6.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP 806.04, MPEP 808.01). In the instant case, the specifically claimed nucleic acids of invention I are not required to perform the method of invention II. Further, the nucleic acids of invention I can be made in a materially different process, such that the nucleic acids can be chemically synthesized or can be directly isolated from natural sources.

3. These inventions are distinct for the reasons given above and have acquired a different status in the art as demonstrated by their different classification and recognized divergent subject matter. Further, a search for inventions I and II requires different keyword and sequence database searches that are not co-extensive. For example, a search for the nucleic acids of invention I would require different keyword and sequence searches as compared to a search for methods for identifying a single copy sequence interval by comparing a target sequence to a known single copy gene sequence. Additionally, a finding that the nucleic acids of invention I are novel and unobvious

Art Unit: 1634

would not necessarily extend to a holding that the methods for identifying a single copy sequence interval are also novel and unobvious. Similarly, a search indicating that the nucleic acids of invention I were known or would have been obvious would not necessarily extend to a holding that the methods for identifying a single copy sequence interval were also known and obvious. Accordingly, examination of these distinct inventions would pose a serious burden and therefore restriction for examination purposes as indicated is proper.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of

Art Unit: 1634

record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
